

Show All Home Button - Tip #84

In the User Manual for NASA TechTracS, the steps needed to set the Home Button on the Control Center are covered. By simply navigating to a specific table and holding the Alt key while clicking the Home button allows the user to set the Home table.

Some users may want to take this a step further by having all records for the chosen table selected when the Home button is clicked. To do this follow steps 1 - 4 below.

Step 1:

In NASA TechTracS, click on the Prefs button to open up the Preferences page. **Deselect** Remember last selection.

Preferences

Current User

User Name kmorrison

Reset Windows & Columns

Edit Access...

Done

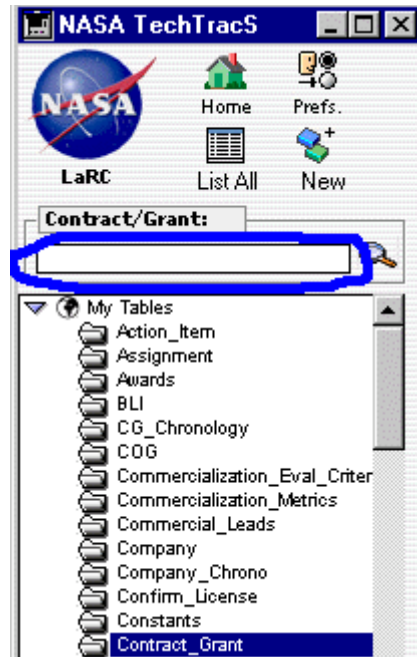

Step 2:

Highlight the desired table on the control panel.

Show All Home Button - Tip #84

Step 3:

Leave Quick Find blank.

Step 4:

Hold the Alt button down while clicking the Home button.

The next time the Home button is clicked or the user logs in all records for the selected table will be listed.
